

# Physical Compressed Air Dryer

## Providing clean compressed air without energy consumption

### No power required

Applying characteristics of compressed air, hydromechanics and physical principles to design internal structure.

### Consumable-free, maintenance-free

Exclusive patented structural design can separate moisture from compressed air without consumables.

### Efficiency of air drying and moisture filtration: 99%

Patented high efficiency water-cooled heat exchanger and special air-water separation structure.

### High quality, durable, and longevity up to 10 years

No compromise on quality, the product is made in Taiwan.

### No electronic and other energy-driven device

Suitable for those who have special needs for compressed air.
