

YIDA PRECISION

Humanity. Innovation. Technology

- Slant Bed Design
- Precision Turning Performance
- Extraordinary Efficiency Extensive Cutting Capacity

Linear Guide Way

## CNC LATHES

### ML Series

- High speed cutting with fine finish effect
- Linear ways on X, Y, Z axes
- Various tool turrets to select from
- Fully automated production system available

# SLANT BED CNC LATHE

Processing precision parts with top performance and high efficiency cutting

Linear guide ways lathe with high cost-performance index

Users across various industries desire a CNC lathe that offers high precision turning performance and technical reliability at a competitive price. YIDA's ML Series CNC Lathe can fully meet these requirements. With the ML series, you can reduce machining time due to high feed rates. The massive slant bed structure provides maximum stability during cutting. With the use of C-axis function in combination with the live-tooling turret, the machine can perform milling, drilling, and tapping operations with a single setup of the workpiece.

## Advantages of Slant Bed Lathe

Easy chip evacuation, small footprint and ergonomic operation.

# GANG TYPE / TURRET TYPE TURNING CENTER

- Flat bed design, compact floor space, and multi-tasking production
- X / Y / Z axis linear guide way with high feed rate and low abrasion
- Varied turret and gang tooling selection - gang tooling system and turret
- Enhancement of varied parts with Y-axis tooling system design

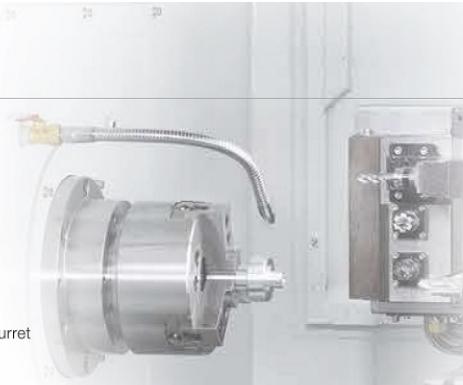

Compact  
Floor Space

Flexible  
Tooling Choice

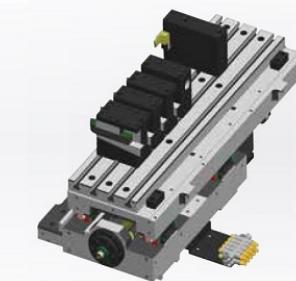

High Accuracy  
High Efficiency

Modern  
Outlook with  
Sleek Design

Production Cell  
for High Volume  
Application

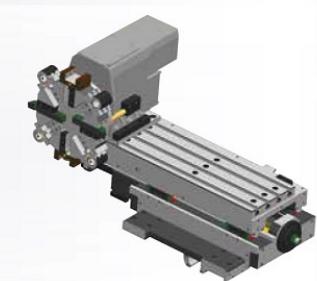

Focus on reliability and precision machining  
for automation, high speed and complex  
development workflows

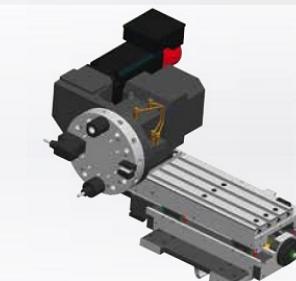

**ML-430 + Gang-Tool**

- Low cost and compact configuration
- Long X-axis traverse, 5~6 tools, and 30 m/min. feed rate, offers quick and high precision machining jobs
- Auxiliary tool plate available for quick tool-set change
- Load / Unload system (optional)

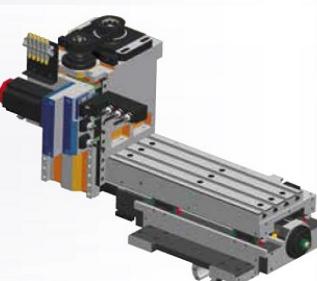

**ML-430 + Hydraulic or Servo Turret + Gang-Tool**

- Gang-tool slide can be mounted for a total of 12-13 tools available when alongside an 8T turret.
- Auxiliary tool plate available for quick tool-set change
- Load / Unload system (optional)
- High pressure coolant pump (optional)

**ML-430 + Power Turret + Gang-Tool**

- Auxiliary tool plate for gang-tool can also mount 12T power turret at 5000 rpm, totally 15~16 tools.
- Offer CS-axis for turn-mill machining job
- Load / Unload system (optional)
- High pressure coolant pump (optional)

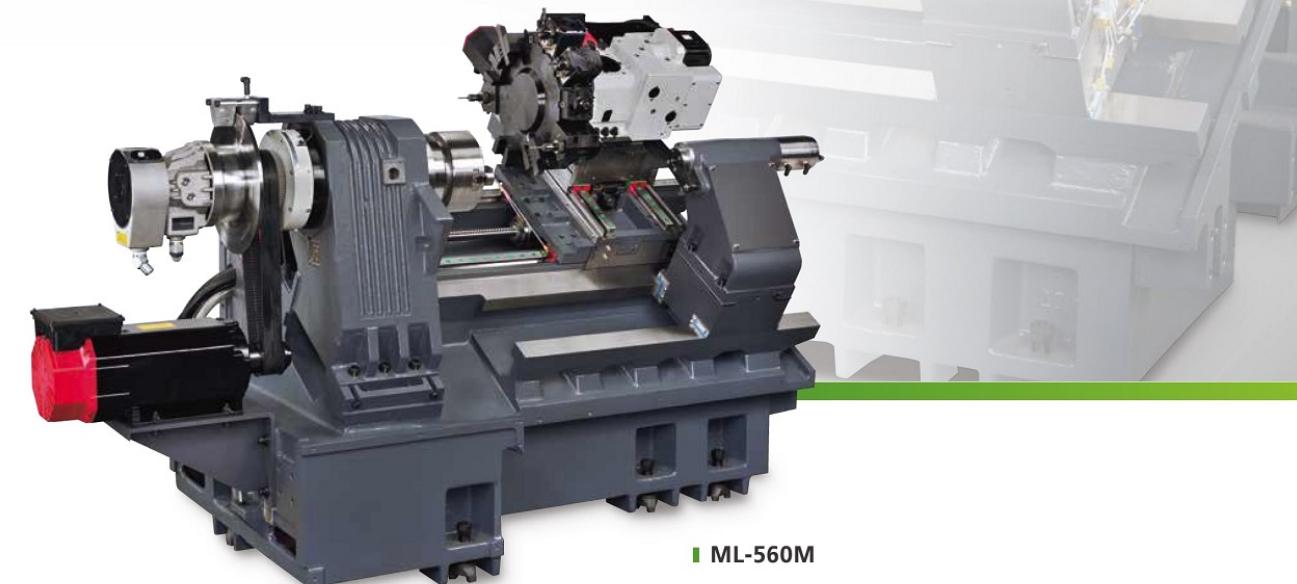

**ML-430Y + Gang-Tool**

- Auxiliary tool plate for gang-tool turret mount 5-tools for Y-axis power turret.
- Offer CS-axis for turn-mill machining job.
- Load / Unload system (optional)
- High pressure coolant pump (optional)

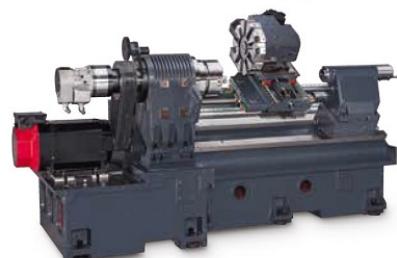

# ROBUST STRUCTURE

## Get exceptional rigidity with YIDA's optional bed design

The YIDA ML Series of CNC lathes features a compact machine structure. All structural parts are manufactured from high quality cast iron, stress relieved to eliminate deformation problems. The structural parts are scientifically rib reinforced to damp vibration reduce structural deflection to a minimum. During the machine design stage, Finite Element Analysis (FEA) is applied to simulate various stress/strain conditions. This allows the ML series to achieve outstanding vibration resistant performance.

ML-560M

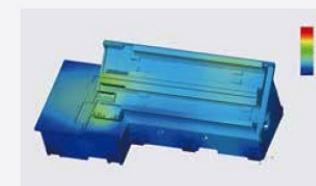

ML-600M

ML-360

ML-430

Finite Element Analysis (FEA)

Highly Rigid Headstock

The headstock with wide base design contributes to lower center of gravity, thus increasing rigidity and stability during cutting.

Automatic Tailstock

The saddle drives the tailstock via a lock pin on the tailstock.

Linear Guideways

High precision heavy duty roller type linear guideways are mounted on X, Y & Z axes, allowing the axes to move at high rapid traverse rates with high positioning accuracy due to low stick-slip and low coefficient of friction.

High Precision,  
High Speed Ballscrews

Ballscrews on X & Z axes are pretensioned in combination with the use of double nuts to eliminate backlash. The pretensioned ballscrews effectively suppress temperature buildup during high speed machining.

## QUALITY FEATURES FOR BETTER PERFORMANCE

### CS-AXIS / Y-AXIS / CF-AXIS

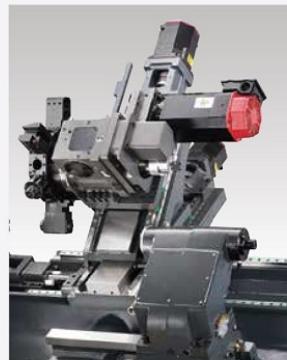

#### CS-Axis Function

- The CS-axis function in combination with the live tooling turret enable the machine to perform milling, drilling and tapping operations with only a single setup.
- CS-axis is equipped with a rotary encoder for high orientating accuracy.

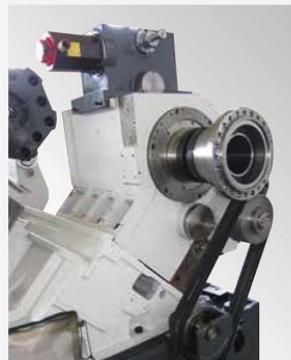

Turn-milling center MT-540 obtained the Award of Eminence at TIMTOS 2011, with its orthogonal structure and rotating mill head, offering C, Y and B axes turn-mill capability.

#### Y-Axis Function

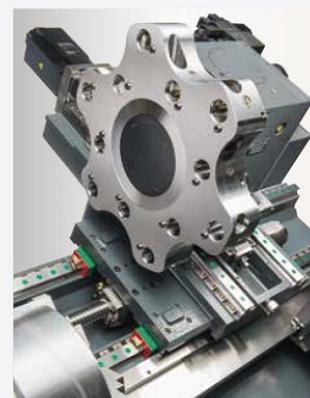

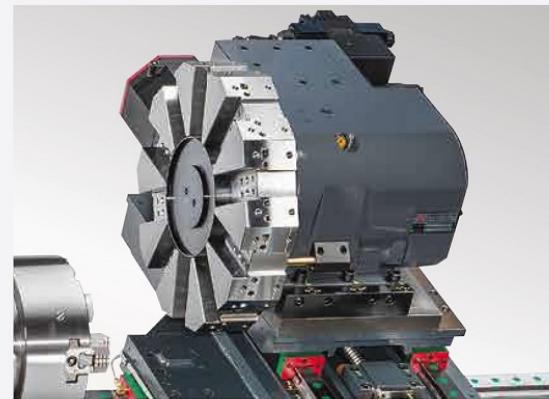

- The Y-axis features a lightweight structure and is directly driven by a servo for high positioning accuracy.
- The excellent use of a Y axis saves money, time, floor space, manpower and fixture cost. Full cycle machining reduces loss of accuracy.

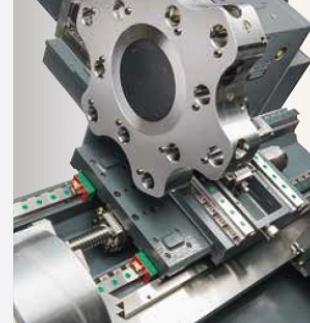

#### CF-Axis Function (for ML-850)

- The CF-axis features higher rigidity and is ideal for heavy cutting application.
- The CF-axis function in combination with the live tooling turret enable the machine to perform milling, drilling and tapping operations with a single setup.

### TURRET

**Hydraulic Turret  
(Standard)**

**Live Tooling Turret  
(Optional)**

**Servo Turret  
(Optional)**

**VDI or BMT Turret Disc  
(Optional)**

### GEARBOX

#### Headstock with 4-Step Gear Transmission

- The spindle rotation is transmitted through a 4-step gearbox, providing spindle speed range from 40 to 2,000 RPM. This provides high torque output, making the machine suitable for heavy cutting.
- An oil cooling system is contained inside the box in combination with a heat exchanger mounted outside the box.

**Gearbox on ML-850**

**GTP or ZF gear box (Optional)**

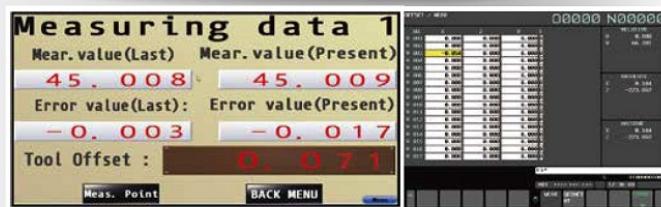

#### Heidenhain ERM Magnetic Encoder

C axis for lathe application is usually for machining bar material. The precision and repeatability of the ERM magnetic encoder can improve milling performance on C axis application.

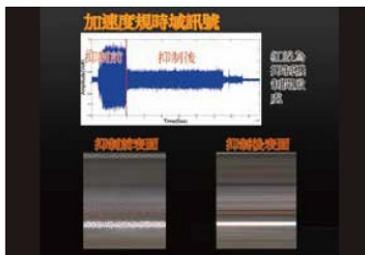

## AUTOMATIC MACHINING COMPENSATION

Comparing the error value between the measured point data and the measured workpiece data, then outputting the error value to the NC for executing tool wear compensation.

## DESCRIPTION OF VIBRATION SUPPRESSION

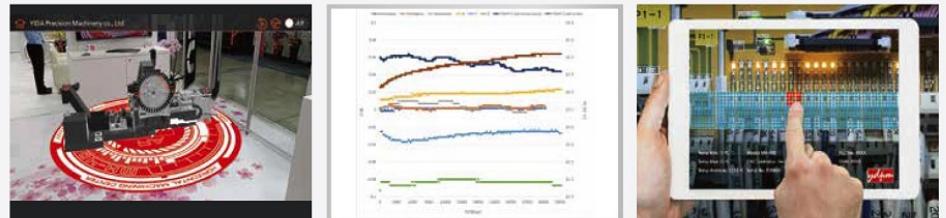

Our system provides instant adjustment of cutting parameters for suppressing vibration on a smart production line. This function is designed to meet the requirements of smart production lines. It helps to upgrade machining surface quality, reduce tool wear, reduce vibration, and reduce energy consumption of a cutting motor, thus resulting in an overall energy saving effect.

YIDA collaborates with universities, industrial research centers and institutes in many areas, with many efforts leading to awards and prizes. The anti-vibration features of the BML-500 earned it the Award of Eminence at TIMTOS 2015.

## CONTROL: AI, IOT, ITRI CONTROL SYSTEM

Since maintenance has a direct influence on performance, productivity and product quality, we're improving the process through recent developments in Augmented Reality technologies.

The FANUC AI Thermal Displacement Compensation module was implemented on EV-860. The thermal displacement after applying AI adjustment is within 0.002 mm, compared to 0.08 mm without AI.

Current efforts are focused on developing AR applications for maintenance.

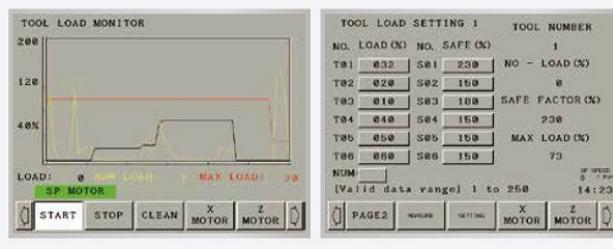

## SMART MACHINE ENGINE

## PRODUCTION MANUFACTURER / PROCESS RECORDS

## SPINDLE OR SERVO LOAD INSPECTION

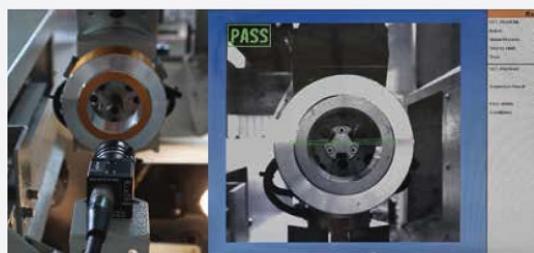

### Spindle or Servo-axis Load Inspection

This function is used to inspect the spindle load or servo axis load through the controller. If the spindle load or servo axis load exceeds a set value, the machine will stop and an alarm will occur.

### Features

- Can be equipped with a built-in gantry type automation device with automatic detection function.
- Outstanding features of parts supply equipment are low investment cost, fast parts change, small space occupation, and excellent scalability. Applicable for parts loading and unloading for metalworking on a CNC lathe, which can reduce parts changing time and achieve high automation efficiency.

Designed to meet the requirements in an automated production line, the device provides positioning and quality inspection, size measurement, identification and confirmation. Using the controller's image treatment to conduct visual inspection functionality can eliminate human error in judgment and inspection. As a result, product quality and machining yield rate can be upgraded.

- Help customers to save investment capital and working costs, which in turn creates automation efficiency and competitiveness.
- Available to select various types of modular parts supply equipment for increased efficiency and time sharing.

### Smart Machine Industrialization

To meet specific machining requirements, various automation devices and automatic detection functions can be selected (such as vibration suppression, collision compensation, measurement and image).

### Rotating Change Type Twin Jaw

The pneumatic twin jaws design upgrades part clamping stability. Fast clamping / unclamping without damage to the workpiece.

### Rotating Elevating Type Part Supply Device

Suitable for circular discs, stackable parts with specific angle. Transmitted by conveyor chain. Standard design is 16 pallets. Custom designs to meet customer's workpiece requirements are available.

### Specifications

Automatic Gantry Loader System	
Clamping range	Ø30 mm (Ø1.18")
Max. machining diameter	Ø160 mm (Ø6.3")
Max. weight of workpiece	3 (x2) kg
X axis travel	550 mm
Z axis travel	1,770 mm
X axis feed rate	90 m/min
Z axis feed rate	120 m/min
Clamping type	3-jaw (pneumatic)
Travel of clamping jaws	8 mm

\* X axis - up / down; Z axis - right / left

Feeding System	
Pallet no.	16 pcs
Max. loading	40 kg
Max. height	410 mm

## ACTUAL MACHINING DATA

### O.D. Heavy Cutting

- Material: S45C
- Cutting tool: Ø25 mm
- Feed rate: 0.4 mm/rev
- Cutting depth: 4 mm
- Chip removal: 215 c.c/min

### Slot Cutting

- Material: S45C
- Cutting tool: Ø25 mm
- Feed rate: 0.2 mm/rev
- Cutting width: 4 mm
- Cutting position length: 120 mm

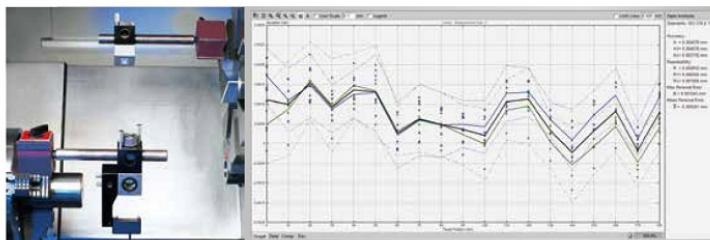

### End Mill

- Material: S45C
- Cutting tool: Ø20 mm
- Cutting width: 16 mm
- Cutting depth: 7 mm
- Feed rate: 500 mm/min

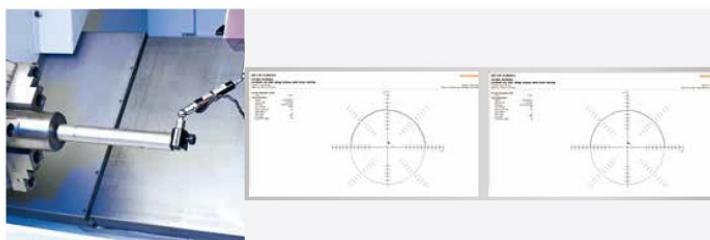

## QUALITY ASSURANCE

Each machine has been inspected before shipping to ensure optimal operation performance.

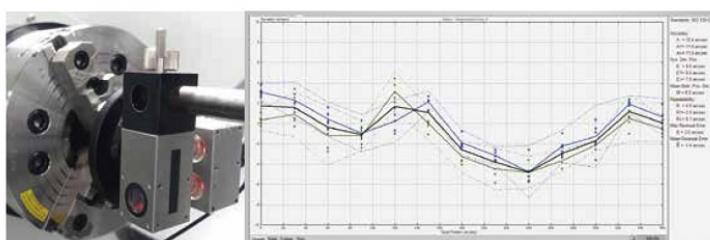

### Laser Calibration

Calibration of the positioning and repeatability for axial.

### Ball Bar Circularit y Inspection

Calibration of roundness deviation for CW / CCW.

C-axis positioning and repeatability accuracy inspection.

## MACHINE ACCESSORIES

### Standard Accessories

- FANUC i-TF PLUS controller (i-TF[3] PLUS for ML-560S/M)
- Spindle motor
- Hydraulic chuck
- YDPM servo turret (ML-560S/M)  
Hydraulic turret (ML-600S/M/L, ML-360, ML-850)
- O.D. turning tools
- I.D. boring bar holders  
Ø8, Ø10, Ø12, Ø20, Ø25, Ø32 x O.D. 40  
(ML-560S/M, ML-600S/M/L, ML-360, ML-360Y)  
Ø12, Ø16, Ø20, Ø25, Ø32, Ø40 x O.D. 50 (ML-850)
- Taper sleeves  
MT No. 2, 3, 4 x O.D. 40 (ML-560S/M,  
ML-600S/M/L, ML-360, ML-360Y)  
MT No. 3, 4 x O.D. 50 (ML-850)
- Tailstock quill  
MT 4 (ML-560S/M, ML-360, ML-360Y)  
MT 5 (ML-600S/M/L, ML-850)
- Coolant system
- Automatic tailstock (exclude ML-430)
- Coolant tank
- Chain type chip conveyor + chip bucket (exclude ML-430)
- Leveling bolts and pads
- Auto. lubrication system
- Work lamp
- Foot pedal for chuck
- Tool kit
- End of program light
- YDPM 4-step gearbox (ML-850)
- Chip flush from upper
- Air blow for chuck (exclude ML-850)

### Optional Accessories

- Mitsubishi controller
- Siemens controller
- Collet chuck (Excl: ML-850)
- Bar feeder
- Bar feeder interface
- VDI / BMT turret (10 or 12 Tool)
- Oil mist collector
- Live tooling (C-axis)  
(ML-560S/M, ML-600S/M/L, ML-360, ML-850)
- Automatic door
- Manual tool setter
- Automatic tool setter
- Transformer
- CE
- GTP, ZF or YDPM 2-step gearbox
- Sling frame
- Stabilizer
- Cooler for coolant tank
- Air conditioner for electrical cabinet
- Hydraulic steady rest
- Parts catcher
- Oil skimmer
- Coolant gun
- Scraper type chip conveyor
- 10 or 20 bar high pressure coolant through tool
- Tool load monitoring
- Linear scale

## OPTIONAL ACCESSORIES

### Built-in Type Spindle

The built-in type spindle provides full power output and low speeds, leading to superior conditions.

### Parts Catcher

Once part machining is completed, the parts catcher will move to collect the finished parts, providing convenience for parts collection.

### Hydraulic Steady Rest

The hydraulic steady rest provides a stable support for long workpieces, and can prevent workpiece springing and bending.

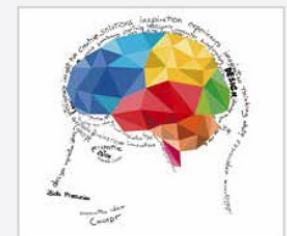

### Tool Measuring Device

The tool is program controlled automatically (or manually) touches the measuring probe to accomplish the setup process. It effectively reduces the setup time and automatically compensates for the wear on tools.

### Expansion Tank for High Pressure Coolant Through Tool

10 bar or 20 bar for option.

### Automation and TURN KEY Solutions

#### Robot

\*Fanuc, Yazkawa, Mitsubishi robots and more.

#### Oil Mist Collector

#### Fan Cooler

#### Bar Feeder
