PRECISION STRUCTURAL DESIGN

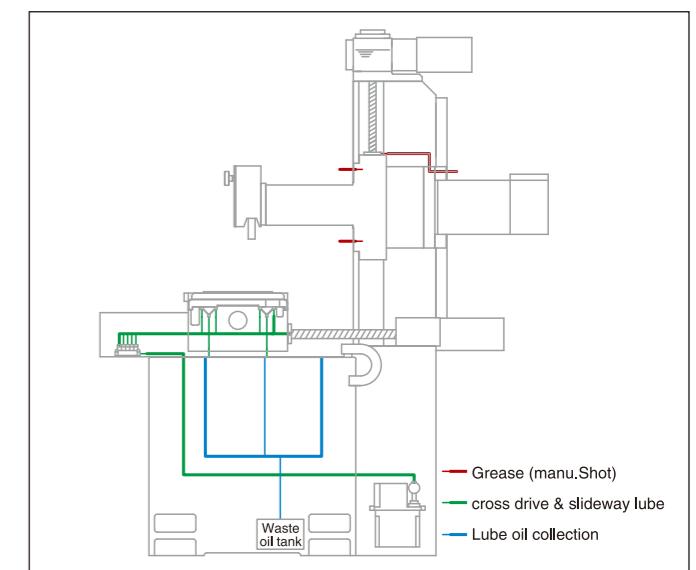

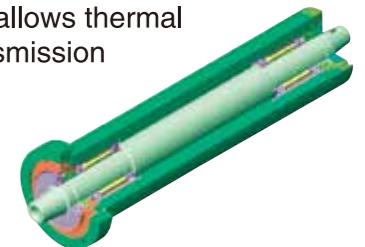

▲ Longitudinal Table

The table travels on double V guideways, coated with low friction Turcite-B Precision scraping makes the table move smoothly on the guideway.

◀ Wheel Spindle

The high precision cartridge type spindle is supported by two precision angular contact ball bearings - at the front and rear ends. Bearings are preloaded and carefully assembled in a constant-temperature environment. Special grease for the NC machine spindle is employed without need of further lubrication and combined with non-contact labyrinth type seals, ensuring an excellent lubrication effect. Spacing collars are precision measured and preloaded before fitting. They are fixed at the front end and removable at the rear end. This allows thermal strain transfer to the rear end to minimize transmission error while assuring long service life and high accuracy.

▲ Automatic Lubrication System

Each Joen Lih machine is equipped with an automatic lubrication system as standard equipment. The lubrication system employs a electromagnetic pump. Oil injection is controlled by PLC based on the moving distance set. Oil is delivered to all slideways, table, saddle, gears and screws for reducing friction, extending parts service life and ensuring machining accuracy. (In case of no oil, the lubricator will sound an alarm.)

◀ One-Piece Fabricated Base

The massive base is one-piece constructed, providing a solid support for the saddle, table and column. This greatly upgrades stability and rigidity.

JL-63CNC-B

FULLY ENCLOSED SPLASH GUARD

A powerful coolant flushing device is available. It provides cooling, lubrication, and chip exhaust functions for the workpiece, allowing the grinding wheel to maintain outstanding grinding quality at all times. In addition, it also dramatically reduces environmental pollution.

Hydraulic Drive (H Series)

Longitudinal Table

The table travels on double V guideways, coated with lowfriction Turcite-B Precision scraping makes the table move smoothly on the guideway.

The longitudinal movement is driven by a hydraulic system, combined with flow control to provide variable speed change for the table.

Right End Stop Function

The specially designed "Right End Stop" makes it easier for wheel auto dressing and auto compensation.

Precision hand-made scraping on guideway ensures extraordinary performance in surface grinding accuracies and finish where exceptional value for the investment is the goal. Test reports accompanying each grinder certify the built-in accuracies for these performance machine tools and attest to the meticulous hours of hand labor used in crafting to exacting specifications.

There is only one way to build a precision surface grinder. Hand scraping, then fitting, then hand scraping again and again until critical alignment parts fit exactly as designed without compromise.

Ballscrew and Servomotor Drive (B Series)

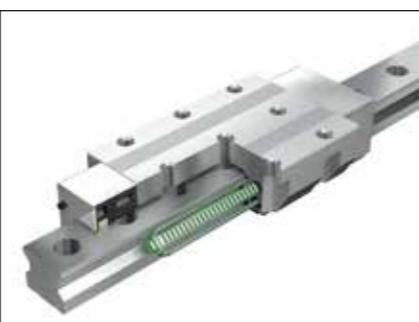

Superior Machining Efficiency

Joen Lih surface grinders employ precision ball screw and linear guide ways on the Y axis. AC servomotors directly drive the ball screw, combined with a sensitive servo system featuring high frequency response, making this machine ideal for continuous machining. This upgrades machine efficiency to a maximum.

Precision Ballscrews

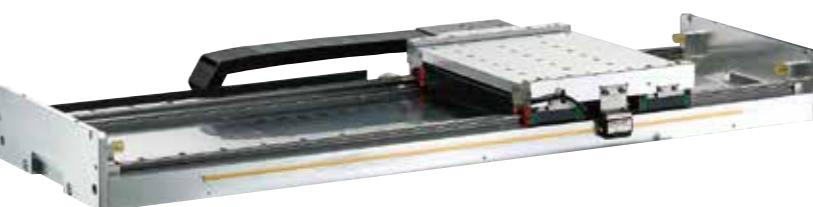

Ballscrews are specially hardened to reach 50HRC surface hardness. The leadscrews for vertical and cross feeds are precision ground to reduce backlash to a minimum. Thorough lubrication in the entire travel ensures high positioning and grinding accuracy.

Linear Guideway

The linear guideway features in high-speed motion, high positioning accuracy, low friction and stability, making it ideal for high efficiency processing with linear motor. Linear guideways are mounted and fastened on the bed; thus, the issues of table floating and oil level difference are minimized even under high speed processing. The low-friction feature allows workpieces to have superior straightness accuracy after processing.

Linear Motor (LM Series)

Application

- P.C.B drilling machine
- Machine tool
- General Industrial machinery

▲ JL-52CNC-LM

Features of Linear Motor

- Iron core design increases the efficiency of the linear motor.
- Due to less contact between mechanical parts, the linear motor features high response and long-term stability.
- Compared with ballscrew, the linear motor has higher moving speed and positioning accuracy, resulting from its high speed dynamic response and higher speed.

ELECTRIC CONTROL SYSTEM

Controller systems are available for choose, including Fanuc, Siemens, and Syntec.

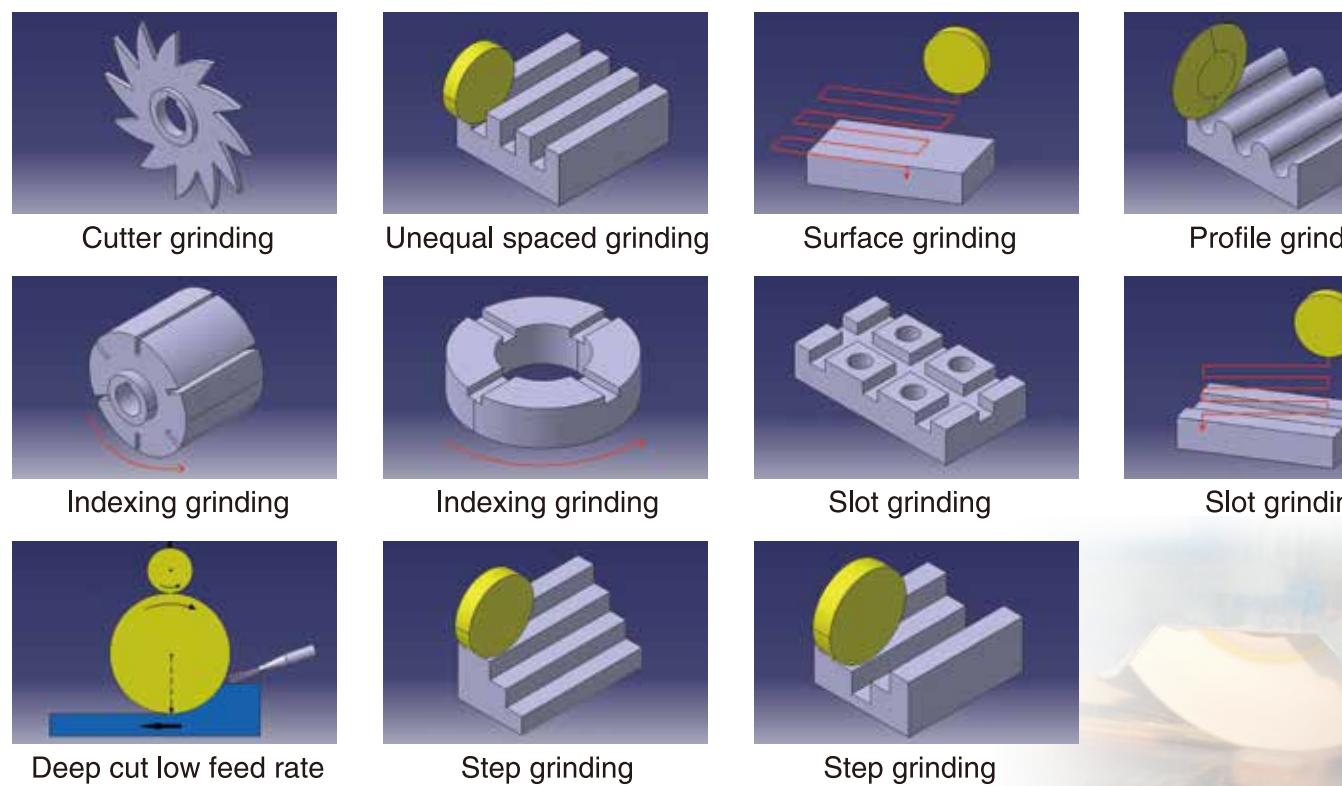

CNC CONTROL

- 10.4" color LCD screen
- MMC 103 human-machine interface
- 19" machine control panel
- Program memory card
- Transmission interface
- MPG handwheel

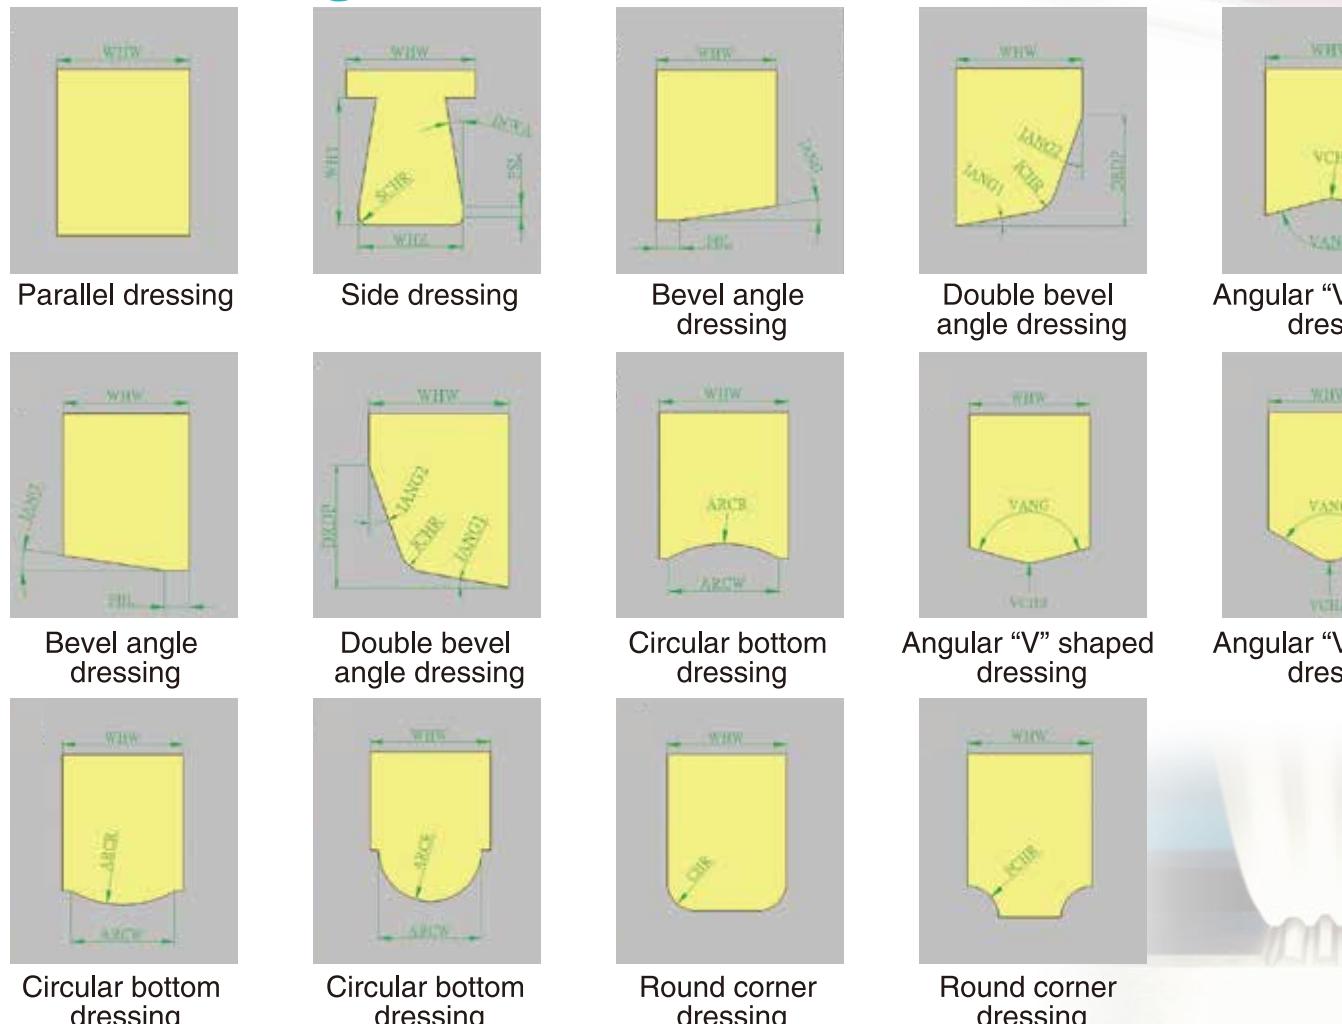

CNC STANDARD SPECIFICATIONS

- Controlled axes (X, Y, Z)
- Simultaneous controllable axes 2-4axes
- Least command increment 0.0001mm
- Inch/Metric conversion
- Emergency stop
- Servo off
- MDI operation
- Dry run
- Single block operation
- M.P.G. (Manual pulse generator)
- Linear Interpolation
- Circular Interpolation
- Dwell
- Skip function
- Manual reference point return
- Automatic reference point return
- 2nd reference point return
- Rapid positioning
- Automatic acceleration / deceleration
- Feed rate override 0-150% (10%per)
- Manual continuous feed
- Macro B
- Network socket
- M.P.G. interruption function
- EIA/ISO automatic recognition
- Self-diagnosis function
- X, Y, Z, B axes servo motor
- Wheel automatic dressing & compensation
- Dresser auto. Position
- Programmable control dresser
- Automatic tool diameter correction
- Backlash compensation
- Automatic coordinate system setting & conversion
- Part program storage length (649m)
- Spindle power display
- Custom macro
- Program protection
- Wheel speed protection
- Status display
- Lubrication alarm
- Program display protection
- Language display
- PMC-L ladder search
- Magnetic chuck voltage display
- Programmable control magnetic force
- Instruction display
- G codes menu display
- 10.4" TFT Colors display
- Programmable control

Grinding Applications

Dressing Modes

Accessories

STANDARD ACCESSORIES

- Grinding wheel
- Wheel flange
- Flange extractor
- Wheel balancing arbor
- Levelling screws
- Levelling pads
- Tool box and tools
- Working lamp
- Totally enclosed splash guard

OPTIONAL ACCESSORIES

- Electro magnetic chuck
- Inclinable electro magnetic chuck
- Table mounted dresser
- Angle Dressing attachment
- Demagnetizer
- Wheel parallel dresser
- Coolant system
- Angle dressing device
- Combination coolant and dust exhaust unit
- Radius dressing device
- Punch former
- Sine bar
- Digital scale
- Coolant system with paper filter and magnetic separator
- Coolant system with paper strip filter and magnetic separator
- Oil mist collector
- Wheel flange
- Flange extractor
- Wheel balancing arbor
- Levelling screws
- Levelling pads
- Tool box and tools
- Working lamp
- Totally enclosed splash guard
